Brilliant light: incredibly bright and fully coaxial.

HEINE LED LoupeLight® with mPack LL®,
i-View® for S-Frame and Headband Professional L.

Medical and dental professionals depend on bright light for binocular loupe illumination. The new HEINE LED LoupeLight® excels with an impressive 40,000 Lux. But even more importantly, the lighting must be coaxial. In this regard, HEINE refuses to accept second-best and the LED LoupeLight guarantees 100 % coaxial light. The positive result: illumination which is completely even and shadow-free.

High-tech made in Germany: The lenses of HEINE Binocular Loupes are perfectly matched to the LED LoupeLight, which is so small that it fits between the binocular loupes. The latest technologies ensure that there is no generation of excessive heat – even if used for extended periods. It is made possible by the mPack LL with high-performance rechargeable battery, providing power for 17 hours of illumination. This means that unwanted interruptions due to low battery capacity are a thing of the past.

The height and angle of the HEINE LED LoupeLight® with the i-View Loupe Mount for the S-Frame can be adjusted to suit the work habits of the physician exactly, allowing the physician complete freedom to assume any position of head or posture. The light remains focussed on the examination site even if the optics are swivelled out of line of sight. This ergonomic advantage makes working for longer periods more pleasant, thanks to HEINE.
